EDUCATION

IIT GUWAHATI

INDIAN INSTITUTE OF TECHNOLOGY,
GUWAHATI,
2012-16
B.TECH IN ELECTRONICS &
COMMUNICATION ENGINEERING

SKILLS

Programming Languages:

Java (Proficient) • Python • Kotlin • SQL • Scala • GoLang

Web

Spring Boot (Proficient) • Hibernate • FastApi

Infra & CICD:

Kubernetes(k8s) • Github Action • Argo Workflows

Persistence:

Postgres • Redis • Couchbase • Kafka

Cloud Services:

Amazon Web Services (AWS)

OLAP Systems:

Spark • S3 • Superset • Looker

Observability:

Grafana • ELK • Prometheus • Datadog

Java Performance Monitoring:

JMeter • Jconsole • JProfiler

Other:

Maven • Docker • Grafana • JMeter • Git

EXPERIENCE

CIMULINK | FOUNDER

Aug 2025 – Present | Remote, IN

- Founded a software consultancy specializing in system integration, AI automation, and performance scaling.
- Established a rapid development workflow using GitHub, Vercel, and Supabase; leveraged modern full-stack frameworks and GenAI to accelerate prototyping.
- Developed and deployed PoC applications, including an AI task scheduler, DSA AI tutor, and social media browser extensions.

ARCESIUM | LEAD SOFTWARE ENGINEER

Aug 2024 – Aug 2025 | Bangalore, IN

- Boosted OData streaming performance by 70% and cut memory usage by 80% with pagination to resolve OOM errors; contributed enhancements to the Apache Olingo 4 serializer.
- Integrated Looker via JDBC to enable secure data visualization with fine-grained access controls.
- Enhanced data pipeline reliability by implementing automated and manual retry capabilities within Argo Workflows.
- Automated end-to-end Looker Explore generation using Query Studio and GitLab CI/CD, eliminating manual setup.

SLICE | SOFTWARE DEVELOPMENT ENGINEER 3

July 2022 – Aug 2024 | Bangalore, IN

- Engineered high-throughput, distributed rate limiter for a core banking system, achieving a scale of 50 TPS while maintaining a P99 latency of under 90ms.
- Led the development of core subscription, wallet, and ledger microservices.
- Engineered a Scala/Spark analytics solution for the settlement service, automating the FinOps reconciliation and settlement process (integrated with Razorpay, Billdesk) and defining the full SDLC.
- Re-architected the UPI recommendation service for high extensibility and enhanced functionality.
- Drove system reliability and efficiency: increased test coverage to 74%, cut database latency by 20%, and reduced on-call workload by 40%. Stabilized microservices by disabling OSIV (slashing connections 90% CPU 20%) and implementing Circuit Breakers, while advancing Kubernetes auto-scaling (HPA/KEDA).
- Created a structured onboarding program to accelerate new hire integration.

PRUDENTIAL | SENIOR SOFTWARE ENGINEER 2

Feb 2021 – July 2022 | Bangalore, IN

- Managed the life cycle of an insurance policy management system, supervising a team of three. Collaborated across teams to ensure seamless feature integration and deployment.
- Designed and implemented a recurring payment system to manage policy payments based on pre-established mandates.

SAP LABS | JAVA DEVELOPER

July 2016 – Feb 2021 | Bangalore, IN

- Designed a unified read-and-write service layer for sensitive portlets, such as Employee Compensation and Job History, ensuring secure data handling.
- Developed a GDPR-compliant data retention tool, enabling automated and manual data purging. Collaborated with three teams for seamless integration and led a design overhaul to meet updated customer requirements.

LEADERSHIP ROLE

TEAM LEAD

Led the development of the Transaction module for Slice Wallet and the Settlement Service from concept to production, enhancing system processes and observability. Managed a team of six, ensuring effective collaboration and project execution across functions.

SCRUM MASTER

Spearheaded the team's adoption of agile methodologies by taking on the additional role of Scrum Master for 1.5 years.
